Euronda[®]
Alle

Euronda®

It's all about protection

Founded in 1975, Euronda is now an Italian company with a global outlook, synonymous with outstanding protection in the medical field. With more than 200 employees, a 15,000 sq.m. headquarters, 4 subsidiaries abroad and affiliates worldwide, it is present on the market with 4 product lines dedicated to the safety of the dental environment and the protection of professionals, dentists and patients.

Monoart®, the range of disposable products that teams maximum quality with vibrant colours. **Pro System**, the comprehensive sterilization system that optimises and tracks the entire process. **Alle®**, the disposable line to create a sterile surgical field and prevent infection. **Eurosteril®**, rolls and pouches that ensure sterility is maintained over time.

Driven by a dynamic team, Euronda combines in-depth knowledge of the market with ongoing innovation in materials, processes and technologies to meet the needs of the sector and optimize work phases in full compliance with regulations, with particular attention to the environmental impact of the products and processes.

Euronda Alle[®]

Your surgical field Simply perfect

Alle[®] is the line of disposable products designed specifically to create a sterile and uncontaminated surgical field for dental procedures, and to prevent the risk of infection.

Alle[®] is a comprehensive line of products aimed at providing dental clinics with the high standards of protection required in operating rooms.

Alle[®] sterile sets

Totally safe and practical for all your needs

A complete line of single-use, sterile sets for the protection of dentists, assistants and patients, and for the preparation of surgical fields. These sets have been carefully designed to respond effectively to the needs of all dental surgical operations. The contents of the sets vary based on the type of procedure and consist of multiple sterile products packaged in order of use. These sets satisfy requirements for a variety of procedures, in particular there are four sets designed for gowning, two sets for implantology, two for preparing your operating field, and one that contains every tool needed to deal with any type of surgery.

Comprehensive

The Euronda Alle[®] sets satisfy individual needs for all kinds of surgery.

Practical

Contents are organised in a practical way and components are arranged in order of use.

Efficient

The sterile sets significantly reduce the time needed to set up your operating field and make it easy to manage your purchases.

Patient Set

Comfort and protection for patients undergoing surgery

Sterile apparel for your patient. A set designed for gowning patients undergoing all types of implant, periodontal, dental surgery and maxillofacial procedures.

Alle[®] gowns

The first level of defence for dentists and assistants

The purpose of using barrier systems (sterile disposable gowns and draping) during surgery is to protect both the patient and staff members in the operating room from the transfer of micro-organisms, bodily fluids and particles. When worn properly, they help to keep your operating fields sterile. Comfortable, soft, waterproof and breathable, they provide the utmost comfort during procedures. Some disposable barrier systems are available in non-sterile versions as well, to provide comfort for all professionals and patients.

For any need

Available in nonwoven fabric, nonwoven fabric coupled with a polyethylene layer, SMS microfibre and breathable Spunlace material to provide the desired level of comfort.

Versatile

A comprehensive range of sterile gowns to protect dentists, patients and whole surgery teams.

Traceable

Packed with peel-off labels to provide maximum traceability and security for dental clinics.

Spunlace gown

Outstanding comfort for complex operations

This highly breathable gown is exceptionally comfortable and very water-resistant. The surgical pleat, double lace fastening (inside and out), cotton cuffs and Velcro neck strap guarantee the perfect fit. It comes with two sterile paper hand towels.

Classification

Medical Device Class Is compliant with EN 13795 standard

Other items of protection

Irreplaceable day-to-day accessories

Our line of complementary accessories includes non-sterile products that provide total protection during any kind of surgical procedure or day-to-day activities at your dental practice. Three- and Four-layer masks with bacterial filtration performance greater than 98%. Glasses and visors protect the wearer from bodily fluids and sprays and aerosols emitted by rotary instruments, air-water syringes and scalers. Scrub caps and scrub shoes provide extra safety for surgical teams and patients. High-quality, Monoart® latex gloves are perfect for routine activities and everyday check-ups. Protective aprons made from waterproof polyethylene for maximum patient protection. Surgical sponges for washing hands before any direct contact with the aseptic surgical field.

Face masks

Protection 3

Disposable medical face masks, ideal for preventing the transmission of micro-organisms by air. They guarantee excellent breathability (ΔP 25.4 Pa/cm²), which exceeds the requirements of EN 14683 ($\Delta P < 40$ Pa/cm²). Equipped with a particulate and antibacterial filter (99.7% filtration efficiency). Built-in nose bridge.

Face masks Protection 3 consist of 3 layers:

- soft and colourful water-repellent Spunbond non-woven fabric on the outside;
- Meltblown non-woven fabric middle layer;
- comfortable hydrophilic Spunbond NWT on the inside for effective absorption of sweat and moisture.

Available in 2 versions:

- with soft side elastics (all colours);
- with adjustable ties (light blue only).

Face masks

Protection Soft

Disposable medical face masks, fluid resistant (16 kPa), ideal for aerosol and splash protection. Prevent the transmission of micro-organisms by air and ensure excellent breathability (ΔP 42.5 Pa/cm²), which exceeds the requirements of EN 14683 ($\Delta P < 60$ Pa/cm²). Equipped with a particulate and antibacterial filter (99.7% bacterial filtration efficiency and 99.8% particulate filtration efficiency). Soft rounded elastics and elongated double-track nose bridge.

Face masks Protection Soft consist of 4 layers:

- double layer of soft coloured water-repellent Spunbond NWT on the outside for greater protection from aerosol and splashes;
- Meltblown non-woven fabric middle layer;
- comfortable hydrophilic Spunbond non-woven fabric on the inside for effective absorption of sweat and moisture.

Protection

Sensitive

Disposable medical face masks, fluid resistant (21.3 kPa), ideal for aerosol and splash protection. Prevent the transmission of micro-organisms by air and ensure excellent breathability (ΔP 38.6 Pa/cm²), which exceeds the requirements of EN 14683 ($\Delta P < 60$ Pa/cm²). Equipped with a particulate and antibacterial filter (99.7% filtration efficiency). Made from selected cellulose, they do not contain latex, glass fibre or chemical substances, and are thus able to protect the most sensitive skin and avoid the risk of irritations, dermatitis and allergies. Soft flat elastics welded onto the outside, elongated nose bridge and Perfect Fit system.

Face masks Protection Sensitive consist of 4 layers:

- double layer made of soft and coloured water-repellent Spunbond NWT on the outside for the best protection from microbial agents;
- middle layer made of Meltblown NWT;
- comfortable layer made of hydrophilic cellulose.

Contemporary glasses

Our Contemporary glasses offer the perfect combination of elegance, protection, comfort and style. Lightweight and very strong, Contemporary glasses are the perfect protective solution for doctors and assistants. The anti-fog treatment makes the lenses twice as effective against condensation, while the anti-scratch treatment is five times as resistant to abrasions. This is combined with a sophisticated and exclusive design, with a glossy total black frame, which allows the easy replacement of the standard lenses with corrective lenses if necessary.

Treatment of protective eyewear

When used in combination with the surgical mask, lenses may fog up, impairing visibility. Monoart® safety goggles offer different types of treatment to prevent the formation of condensation:

- **Anti-fog Basic treatment:** meets requirement N of EN 166, preventing condensation formation for 8 seconds;
- **Anti-fog Plus treatment:** guarantees anti-fog properties 5 times higher than requirement N of EN 166, preventing the formation of condensation for 40 seconds;
- **Anti-fog Ultra treatment:** made on the inside of the lens, it prevents the formation of condensation over 40 seconds, guaranteeing outstanding anti-fog properties.

Scratches can compromise lens transparency and thus visibility, exposing the operator to various risks. The lenses of Monoart® safety goggles offer different levels of protection against scratches and abrasions:

- **Anti-scratch Basic treatment:** meets requirement K of EN 166, which requires testing the scratch resistance by dropping quartz sand on the lens from a certain height and then testing the reduced luminance factor;
- **Anti-scratch Plus treatment:** hardens the lens surface for excellent scratch resistance and transparency in all conditions. The reduced luminance factor is 2 Cd / Mq x lux;
- **Anti-scratch Ultra treatment:** guarantees a longer lifespan, improved visibility even in critical conditions, and performs significantly better than standard anti-scratch treatments on the market. The reduced luminance factor is 1.2 Cd / Mq x lux.

Frame technologies

Monoart® protective eyewear offers maximum comfort and ergonomics thanks to the innovative use of materials, attention to detail and careful design. You will find the following technologies in the Monoart® eyewear range:

- Adjustable nose pad;
- Integrated side protectors;
- Tilting movement of the temples for a perfect fit and stability;
- Adjustable tilt and length of the temples for a perfect fit.

Disposable Latex Gloves

Safe, comfortable, durable: Monoart® disposable latex gloves offer hygienic, comfortable protection for your hands. Easy to wear, thanks to their polymer inner lining and foldable cuff, they guarantee excellent tactile sensitivity and a firm grip in all conditions, thanks to their micro-roughened surface. The ideal way to approach any procedure with peace of mind.

Classification

Personal Protective Equipment Category 3, compliant with EU Regulation 2016/425

Material

260105	XS	100
260106	S	100
260107	M	100
260108	L	100

Safe

Provide an exceptional protective barrier and contain no substances of concern (SVHC), endocrine disruptors or dust, which are often responsible for the respiratory symptoms caused by latex.

Certified

They meet strict quality control criteria and are certified according to EU Regulation 2016/425, in accordance with standards: EN ISO 374-1, EN ISO 374-4, EN ISO 374-5.

Resilient

Resistant to water, acids and alkalis, offering good protection against micro-organisms and most caustic substances and detergents.

Waterproof shoe covers

Elasticated protection for footwear. It prevents contamination by limiting the transmission of the microorganisms that are found on the soles of patients and medical staff. Non-sterile product.

Alle[®] sterile drapes

Maximum protection for your surgical field

When procedures for setting up surgical fields are followed, sterile and disposable drapes are used to create an uncontaminated environment, protecting both surgical areas and professionals. A range of different materials, sizes and models are available. They are made with a layer of soft, absorbent and waterproof non-woven fabric and a layer of polyethylene film to create a protective barrier and reduce the risk of post-operative infections caused by migrating pathogenic germs.

Innovative

Available in breathable, water-repellent Spunlace, and nonwoven fabric or cellulose coupled with a polyethylene layer, which makes them absorbent and waterproof.

Versatile

A number of varieties are available in different sizes and lengths, including basic draping, drapes with adhesive tape, drapes with central openings and off-centre openings, and drapes with U cuts.

Guaranteed

Individually packaged to guarantee sterility for 59 months and comes with a peel-off label for traceability.

Drapes for Mayo and Instrument tables

Designed to cover surgical tables and to protect equipment. Main drapes cover instrument tables, while Mayo tables are protected by pocket-like drapes for better coverage of the table.

Alle® sterile and non-sterile protective products

For totally safe surgical environments

A wide range of sterile products designed to protect surfaces and small/medium-size apparatus located near surgical fields, and to keep operating rooms free from contamination.

Safe

These allow you to protect all the equipment and small surfaces in your surgical environment, keeping them sterile.

Practical

Each product is easy to apply, enabling you to set up your surgical field in a quicker and more precise manner.

Traceable

Made with high-quality materials and packed in labelled bags for maximum traceability: sterility guaranteed for 59 months.

All-purpose bag for radiographic systems

This all-purpose bag is sterile, see-through and allows you to protect radiographic, photographic and microscopic systems, leaving your surgical field totally sterile.

Alle[®] sterile irrigation lines

The proper cooling of dental drills

Proper irrigation during the creation of the implant site is essential for the necessary osseointegration of the implant and, consequently, the procedure's success. Mechanical and manual irrigation lines are compatible with the main physiodispensers and mechanised systems available on the market. All irrigation lines are Medical Devices of Class IIa, subject to Regulation 2017/745.

Compatible

Totally compatible with the main physiodispensers and implant drills on the market.

High quality

Robust plastic materials and high-quality parts, free from phthalates. No scrupulous manufacturing processes.

Sterile

Individually packed in sterile blister packs with labels for maximum traceability: sterility guaranteed for 59 months.

Mechanical irrigation lines

An appropriate, well gauged jet of liquid coolant is able to bring a dental drill “to the ideal temperature”. This can only be done with an irrigation system that has been specifically created for the different types of physiodispenser available on the market. The soft silicone tips of Alle® irrigation lines is available in different dimensions and can be adapted to the different diameters of wand cooling needles.

Classification

Medical Device Class IIa

Material

Silicone, PVC and ABS, phtalates and latex free

Sterility

Sterility guaranteed for 59 months from the date of sterilization

10 excellent reasons to choose the Euronda Alle[®] irrigation lines

- 1 Versatile**
Ideal for internal one-way Irrigation, with the possibility of internal and external irrigation.
- 2 Compatible**
With the most common physiodispenser models and mechanised systems.
- 3 Packaging**
Packed individually in sterile blister packs.
- 4 Traceable**
Double adhesive label provided for maximum traceability.
- 5 Guaranteed**
Alle[®] products guarantee you all the reliability, functionality and quality of the Euronda brand. The highest quality standards on the market.
- 6 Sterility**
Sterilised with ethylene oxide, following a scrupulous process compliant with the regulations in force regarding residue.
- 7 Free from latex and phthalates**
For complete respect for patients' health and the environment.
- 8 59-months validity**
The sterility of the Euronda Alle[®] irrigation lines is valid for 59 months.
- 9 Quality**
The Alle[®] line offers the highest quality standards on the market, with no compromises.
- 10 Complete**
Equipped with an "open/close" perforator with cap, air filter and silicone final tip to facilitate insertion.

Alle® aspiration systems

These provide accurate aspiration

A selection of aspiration products recommended for all surgical procedures that require accurate aspiration without compromising visibility in the operating field.

Surgical aspirators

Practical, light and manageable during long sessions of surgery. A special no-ply adaptor prevents the connectors from accidentally bending or twisting. They can be connected to dental chairs or central systems. Yankauer aspirator tip available with 2,5 mm openings.

Other products

Useful components
to support activities

All of Euronda's safety and experience in a selection of disposable products used for everyday dental and sterilization procedures. These products are highly tested and stand out due to their high-quality materials, efficiency, safety and effectiveness.

Instant ice

Thanks to its unique formulation, Monoart® instant ice pack guarantees better quality and longer lasting cold. The small size and compact packaging facilitate topical use and provide the perfect concentration of cold in the area to be treated. The pouch is made of a special cellulose that improves tactile sensitivity and feels pleasant on the patient's skin. Manufactured in Italy on automated hands-free production lines to the highest standards of quality and safety.

Sterilization rolls

Eurosteril® sterilization rolls are produced in Italy with the best certified materials: high grammage medical paper (60 g/m²) and a double layer of polyethylene/polypropylene film. State-of-the-art processes ensure: a constant seal during sterilization; extreme ease of opening without fibre release or tearing; proper maintenance of sterility. Coloured chemical indicators signal at a glance that sterilization has taken place.

Classification

Medical Device Class I in compliance with MDR (EU) 2017/745 and EN 868-5

CE Ref

Sterilization pouches

Heat-sealable pouches made of white medical paper with high grammage (60g/m²) and double layer of blue polyethylene/polypropylene film. Three uniform, waterproof side channel seals for maximum microbial protection. Equipped with chemical indicators for steam or EO gas (ethylene oxide) sterilization. Optimum peelability without the release of paper fibres or tears to the film when opening the packaging. Product made in Italy.
